

Preparing beautiful presentations in the HZDR and HIF styles

— A \LaTeX template —

Introduction

This template is based on the popular \LaTeX Beamer class. It mimics the official presentation template outlined in the [corporate design manual](#). For producing a HIF version, enable the global `hif` option:

HIF setting

```
\documentclass[hif, ...]{beamer}
```

PDF and SVG output is possible (see below). SVG offers some interesting features: embedded videos, GIFs and animations that work reliably in modern Web browsers, such as Chrome, Edge and Firefox, and the mouse pointer can be turned into an emulated laser spot: 

SVG settings

```
\documentclass[
  dvisvgm, hypertex, % required
  laserspot % optional
]{beamer}
```

Please send suggestions or feature requests to a.grahn@hzdr.de.

Producing output (I)

This presentation and its sources are packaged as a zip archive which can be downloaded [here](#). The archive's root directory, LaTeX-Beamer-2020, should be used as the master. Make a copy of it for every new presentation. Alternatively, the subdirectory beamerthemehzdr can be copied to $\$TEXMFHOME/tex/latex/$. On Unix-like systems, the personal texmf tree is located in the user's home directory as $\sim/textmf$. In doubt, it can be found with `kpsewhich --var-value TEXMFHOME` on the command line.

Building the presentation requires at least [TeX Live 2023](#) (preferred) or [MiKTeX](#) with up-to-date packages. Both distributions can be installed with normal user privileges alongside a system-wide installation. Additionally, building the SVG version needs a recent [Ghostscript](#).

PDF

```
pdflatex talk    % or lualatex talk
```

As usual, run `latex` as often as needed to resolve internal references. Runs of `bibtex`/`biber` and `makeindex` may be necessary if the presentation contains citations or an index.

Producing output (II)

For SVG output, first enable the `hypertex` and `dvisvgm` document class options in the input file.

SVG

```
dvilualatex talk  
dvisvgm --zoom=-1 --font-format=woff2 --bbox=papersize \  
--page=1- --linkmark=none talk
```

Part I

This is a Part page.

Some math text:

$$E = mc^2 \quad (1)$$

$$\rho = \frac{m}{V} \quad (2)$$

$$\omega = \frac{\partial v}{\partial x} - \frac{\partial u}{\partial y} \quad (3)$$

$$\int_0^1 2x \, dx = 1 \quad (4)$$

$$\log(a \cdot b) = \log a + \log b \quad (5)$$

Colours

(Primary)

Pre-defined, named colours are available and can be used with the usual colour commands, such as `\textcolor{<colour>}{...}`.

Primary colours

Primary colours at different saturations

Colours

(Secondary)

hzdr-gray-80

hzdr-gray-50

hzdr-gray-30

Part II

Videos and animations

(Available only in the SVG version.)

THE END.

Thank you for your attention!
